

FOR IMMEDIATE RELEASE

Pioneering Orthopedic Care: Dr. Joseph C. McGinley Performs First-Ever Minimally Invasive Cubital Tunnel Release at The McGinley Clinic

Casper, WY – December 14, 2023

In a groundbreaking milestone for orthopedic medicine, Dr. Joseph C. McGinley, founder of The McGinley Clinic in Casper, Wyoming, successfully performed a unique, first-ever, minimally invasive approach for cubital tunnel release. This pioneering procedure exemplifies the clinic's commitment to staying at the forefront of medical innovation, offering patients cutting-edge technologies and approaches for the treatment of orthopedic issues and injuries.

Cubital tunnel syndrome, characterized by the compression of the ulnar nerve at the inside of the elbow, can cause symptoms such as numbness and tingling in the pinkie and ring fingers. Traditional surgical treatments involve decompression and potential translocation of the ulnar nerve, often accompanied by weeks or months of recovery.

Dr. McGinley's groundbreaking approach challenges the traditional surgical approach by utilizing a minimally invasive technique. The innovative procedure, performed with a small cutting device, and ultrasound guidance, allows patients to remain completely awake throughout the procedure using only local anesthesia. There are no stitches and patients experience a faster recovery time. This marks a significant advancement in orthopedic medicine, offering a patient-friendly alternative to traditional surgery.

Cubital tunnel syndrome surgery complications can include wound infection, scarring, pain, elbow instability, and sometimes, no relief from symptoms. Dr. McGinley's unique approach addresses these concerns, potentially providing a safer and more efficient solution.

The first patient to undergo this revolutionary procedure, Scott Underbrink, expressed his satisfaction, stating, "I am a huge fan of The McGinley Clinic! I am so glad to be the first and help get the word out about this procedure. I previously had carpal tunnel releases at the McGinley Clinic, and it was highly successful. I love that I can go to the best of the best right here in Casper. I am so glad I canceled my surgery!".

The McGinley Clinic, located at 234 E. 1st Street, Casper, Wyoming, has once again demonstrated its commitment to patient-centered care and innovative solutions. For more information, visit www.mcginleyclinic.com or contact them at 307-315-6403.

Dr. McGinley uses ultrasound guidance during the procedure to ensure precise placement of the device.

This is the first use of this device for a cubital tunnel release. This innovative approach can potentially change the standard of care and eliminate the need for traditional surgery.

First patient, Scott Underbrink after the procedure. The procedure is performed with just local anesthesia while the patient is awake. He remarked, "I didn't feel any pain at all!"

About The McGinley Clinic:

The McGinley Clinic, under the leadership of Dr. Joseph C. McGinley, is a leading orthopedic center dedicated to providing state-of-the-art treatments and personalized care. With a focus on innovation and patient well-being, the clinic continues to redefine the future of orthopedic medicine through groundbreaking procedures and advanced technologies.
